

GlaxoSmithKline Fellowship

Program information

Thanks to the generous support of GlaxoSmithKline (GSK), we are able to offer the GSK fellowship to incoming students who have exemplary records.

GSK fellows will be expected to excel academically, demonstrate leadership within the department, exhibit passion and ingenuity in their research, and stay in good standing by meeting all of the deadlines for progress towards the Ph.D. degree according to the specific degree requirements as described in the Graduate School Bulletin and the Chemistry Department's PhD degree guidelines. This fellowship could be renewed annually up to four years, conditional on this performance. For renewal, at the end of each academic year, GSK fellows will provide an annual report detailing their academic and research accomplishments. In addition, following the annual meeting of the students Ph.D. committee, the Ph.D. committee will provide the chemistry graduate committee with an assessment of the student's progress.
